

Sriram Gopalakrishnan

AI / ML TECHNOLOGY LEADER

Agentic Systems • AI Research • Enterprise AI • Human-AI Interaction • Optimization

marirsg2@gmail.com | Google Scholar

PROFILE

AI/ML technology leader with experience driving AI research, product development, and engineering across generative AI, agentic systems, sequential decision making(automated planning, search and RL), human-AI interaction, combinatorial optimization, logical reasoning, and information retrieval. Leads research agendas and cross-functional technical initiatives while translating emerging AI capabilities into secure, production-ready systems for enterprise users. Combines deep research expertise with hands-on product delivery, technical leadership, team development, and a track record of peer-reviewed publications and patents.

LEADERSHIP & TECHNICAL EXPERTISE

Generative / Agentic AI	Hybrid-agents • Multi-agent systems • Agent evaluations • Synthetic data • Model fine-tuning
Classical AI	Automated planning • Reinforcement learning • Search • Optimization • Information retrieval • Decision intelligence
Human-AI Systems	Human-AI interaction • Human factors • Explainable AI • Human-in-the-loop decision making
Engineering	PyTorch • Hugging Face • Ray • scikit-learn • Combinatorial Optimization Solvers (CPLEX, Clingo, Automated Planners) • OpenSearch • Large-scale software development
AI Leadership	AI strategy • Research & team leadership • Technical strategy • Product development • Cross-functional execution

PROFESSIONAL EXPERIENCE

JPMORGAN CHASE — AI RESEARCH

2024–Present

AI Research Lead

- Leads AI research and technology initiatives spanning generative AI, agentic systems, human-AI interaction, AI data generation, continual learning, and decision optimization; contribute to setting the research agenda for the AI Research team.
- Built secure, token-efficient coding agents for non-technical employees, enabling agentic software-development capabilities through an intuitive browser-based interface leveraging Pyodide.
- Collaborated with faculty and doctoral students on research initiatives including using automated planners for agent orchestration.
- Built and deployed AI systems combining LLMs with classical information retrieval to optimize a critical enterprise process; incorporated explainability and human-factors principles to improve user interaction.
- Co-developed and deployed an optimization and scheduling tool that enables non-technical users to express complex constraints through an easy-to-use interface.
- Co-developed synthetic-data generation and multi-agent systems for evaluating LLM logical reasoning over long-document corpora with inter-document references.
- Developed a process for generating datasets to optimize retrieval models in query-by-document search settings.
- Researched and published methods combining LLMs with automated planners for multi-step tasks and travel planning.
- Managed and mentored employees and interns across research and product development, developing team members and enabling strong results under compressed timelines.

JPMORGAN CHASE — AI RESEARCH

2022–2024

AI Research Senior Associate

- Conducted research on constrained time-series generation and retrieval combining diffusion models with non-convex optimization; work resulted in two conference publications, including a Best Industry Paper Award.
- Researched safer algorithmic recourse with an intern; work resulted in a conference publication and an oral presentation.
- Developed a tool enabling users to specify domain dynamics and generate synthetic data for evaluating the impact of internal programs.

JPMORGAN CHASE — AI RESEARCH

2021

AI Research Summer Associate

- Developed algorithms for intelligently assigning and prioritizing tasks for human teams, incorporating human factors to account for limitations in context switching; research resulted in a conference publication.

JPMORGAN CHASE — AI RESEARCH

2020

AI Research Summer Associate

- Researched goal recognition methods for detecting client financial goals to support improved service delivery; presented work at a workshop on Finance and Planning.

ARIZONA STATE UNIVERSITY — YOCHAN LAB

2017–2022

Graduate Research Associate

- Researched human-aware AI for sequential decision-making; dissertation focused on incorporating human cognitive limitations into decision-making problems and algorithms.

LEHIGH UNIVERSITY — INSYTE LAB

2015–2017

Graduate Research Associate

- Researched learning Hierarchical Task Networks from action traces using clustering and action embeddings; thesis work.

LUTRON ELECTRONICS

2010–2015

Design and Development Engineer / Project Embedded Electrical Engineer

- Coordinated embedded engineering efforts for large-scale smart-lighting and HVAC control systems for residential and commercial building automation.
- Improved software architecture and co-designed a communication protocol; resulting technology was patented.
- Coordinated offshore software development, mentored engineers and interns, supported customer technical training, and developed embedded software and verification strategies.

SELECTED RESEARCH & PUBLICATIONS

- Daneshi, R., Patra, S., Dwarakanath, K., **Gopalakrishnan, S.**, et al. (2026). *The Curious Case of Planning for Unreliable Agents: Challenges and Opportunities in Orchestrating Generative AI Agents*. ICAPS-26 Workshop on Planning in the Era of LLMs.
- Patra, S., Ramani, K., Borrajo, D., & **Gopalakrishnan, S.** (2025). *Generating Domain Specific Natural Language SAT Reasoning Datasets*. NeurIPS Workshop on Efficient Reasoning.
- Borrajo, D., et al. (2025). *GenPlanX: Generation of Plans and Execution*. NeurIPS Workshop on Bridging Language, Agent, and World Models.
- de la Rosa, T., **Gopalakrishnan, S.**, et al. (2024). *TRIP-PAL: Travel Planning with Guarantees by Combining Large Language Models and Automated Planners*. arXiv.
- Wu, H., Sharma, S., Patra, S., & **Gopalakrishnan, S.** (2024). *SafeAR: Towards Safer Algorithmic Recourse by Risk-Aware Policies*. AAIL. **Oral presentation**.
- Coletta, A., **Gopalakrishnan, S.**, et al. (2023). *On the Constrained Time-Series Generation Problem*. NeurIPS.
- Bamford, T., Coletta, A., Fons, E., **Gopalakrishnan, S.**, et al. (2023). *Multi-modal Financial Time-Series Retrieval Through Latent Space Projections*. ICAIF. **Best Industry Paper Award**.

20+ additional publications and workshop papers. [Google Scholar](#)

PATENTS

3 Granted • 3 Filed

- **Multi-Modal Time-Series Retrieval Through Latent Space Projections** — US Patent No. 12,475,133 (2025).
- **Load Control System Responsive to Location of an Occupant and Mobile Devices** — US Patent No. 12,602,020 (2026).
- **Digital Messages in a Load Control System** — US Patent No. 12,127,317 (2024).
- *Additional filed patents:* Generating Data by Combining Large Language Models and Automated Planners; Constrained Time Series Generation; Assignment and Prioritization of Tasks in Decentralized Execution.

EDUCATION

Ph.D., Computer Science — Arizona State University, 2022

Dissertation: *Incorporating Human Cognitive Limitations Into Sequential Decision Making Problems and Algorithms*

M.S., Computer Science — Lehigh University, 2017

B.S., Electrical Engineering & B.A., Computer Science — Lafayette College, 2010
